Work Experience

Full Stack Engineer, BRIQ

04/2025 – Present | Remote

- Contributed to the improvement of a configurable document-processing workflow supporting multiple custom document types, improving user experience by ~30%
- Participated in migrating the application from a legacy stack to a modern stack (Vue 3, TypeScript, Tailwind CSS, Pinia), building responsive and accessible UI components and implementing performance optimizations that improved load times by ~30% and enhanced overall user experience
- Coordinated an AI-powered chatbot using GPT-based models, reducing manual support requests by ~25% and improving user engagement.
- Integrated RESTful APIs with third-party AI services, applying prompt engineering techniques to optimize model outputs, directly enhancing the document-processing workflow's accuracy, consistency, and reducing document matching time by ~40%.

Founding FullStack Engineer, SPAIDERSPACE

10/2024 – 03/2025 | Remote

- Owned end-to-end development of the company's webapp and core AI product Sagan, leading architecture decisions, implementation, and production deployment in a fully remote environment.
- Engineered scalable frontend and backend systems using React, TypeScript, Tailwind CSS, Python, and FastAPI, delivering high performance and seamless UX across web and AI-powered features.
- Deployed AI-driven social media agents for Twitter and LinkedIn using LangChain and SmolAgents, automating 500+ posts and interactions per week and boosting engagement; architected RESTful APIs and WebSocket-based real-time systems.
- Collaborated asynchronously with cross-functional stakeholders via GitHub-based workflows, independently driving 10+ features from concept to production release.

Full Stack Engineer, ESSTART

07/2023 – 07/2024 | Remote

- Engineered a comprehensive event seating chart application using React.js, TypeScript, Tailwind CSS, and Redux Toolkit, alongside intuitive dashboards for event management reducing manual seating assignment time by ~60%.
- Created a streamlined guest interface with search, personal details access, and sharing via SMS and email using AWS SNS and SES.
- Developed a desktop image management application using Electron.js and Tailwind CSS, implementing automatic and manual image uploads with a file watcher and Sharp for image processing, handled 1000+ images per day.
- Integrated Stripe for payments, performed text moderation with AWS Comprehend, and contributed to backend development using AWS Lambda, SAM templates, and MongoDB to enhance system reliability.

Skills

Frontend: Next.js, React, Vue.js, JavaScript, TypeScript, Redux Toolkit, Tailwind CSS, styled-components, HTML/CSS

Backend: Python, FastAPI, AWS, Node.js, Express, Mongoose, MongoDB, PostgreSQL, Prisma

AI: LangChain, LangGraph, LLMs, MCP, AI Agents, RAG

Tools: Git, GitHub, Postman, Vercel, HuggingFace, Inngest, E2B sandbox

Projects

VIBE , AI SaaS

Built an AI-driven SaaS that generates production-ready Next.js applications from natural language, using E2B sandboxed environments and Inngest for async processing. Implemented with Next.js 15, TypeScript, tRPC, PostgreSQL/Prisma, and real-time updates with subscription-based rate limiting.

Education

GNITC, B.Tech electronics and communication engineering

08/2022 | Hyderabad, India
